Assignment # 7: Hashing

1. Write the hash table from a given dataset {12, 90, 73, 3, 26, 61, 48, 42, 88} using the division method as a hash function.

1.1 The hash table size is set to 13 and, in case the collision occurs, the linear probing should be used.

ASCII code is the numerical representation of a character.

ASCII Table

Decimal	65	66	67	68	69	70	71	72	73	74	75	76	77	78
Character	A	B	C	D	E	F	G	H	I	J	K	L	M	N
Decimal	79	80	81	82	83	84	85	86	87	88	89	90		
Character	O	P	Q	R	S	T	U	V	W	X	Y	Z		

2. Write the hash table from a given dataset {D, A, C, K, G, H, F, S, E, 64} using the division method as a hash function.

2.1 The hash table size is set to 11 and, in case the collision occurs, the linear probing should be used.

3. What is the main disadvantage of linear probing in collision resolution?

4. List the two main differences between sequential search and binary search.
