Downloading Jupyter Notebooks from GitHub

1. Click the **Download** button in the top-right corner of the GitHub page to save the Jupyter Notebook.

2. Open **Visual Studio Code (VS Code)**.
3. From the top menu, select **File > Open Folder** or **Open File**.

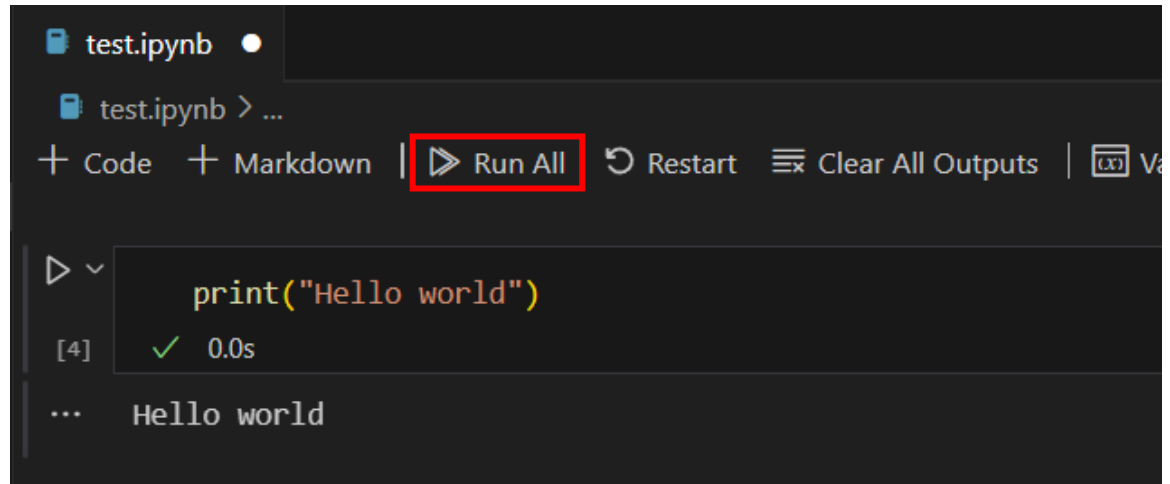

4. Navigate to the downloaded file or project directory, select it, and click **Open**.

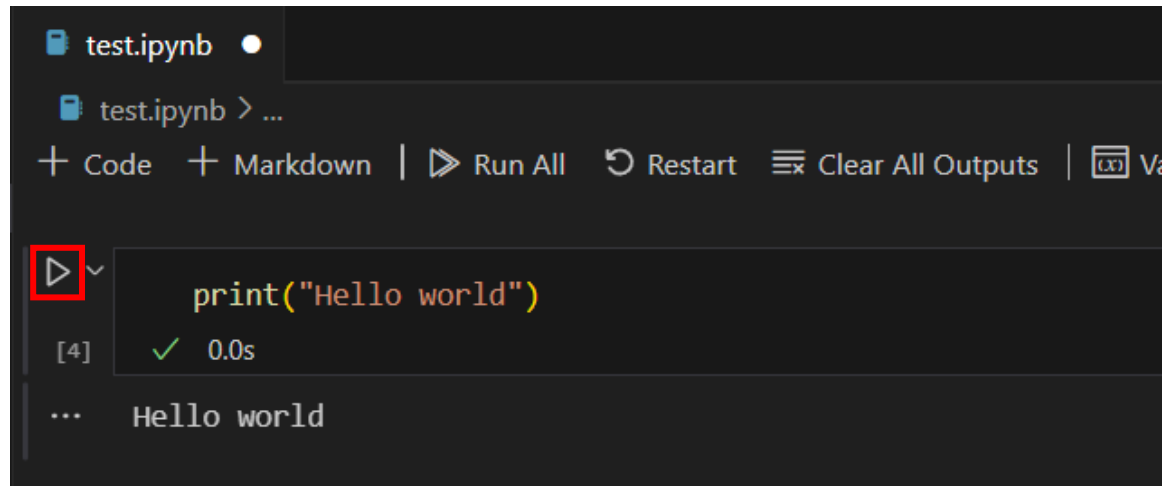

Running Code in Jupyter Notebooks

Running Code without user input

- Click *Run All* at the top of the notebook to execute all cells.

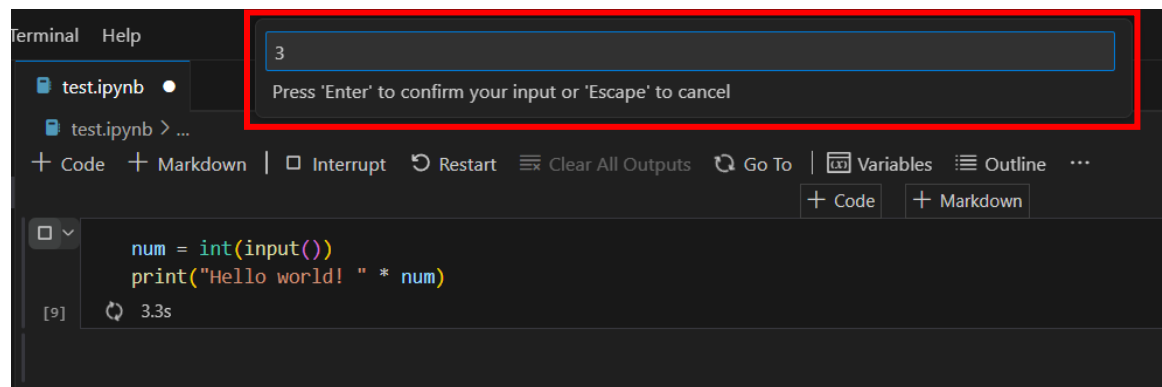

- Click the play icon in front of the cell or press *Shift + Enter* to run it.

Running Code with user input

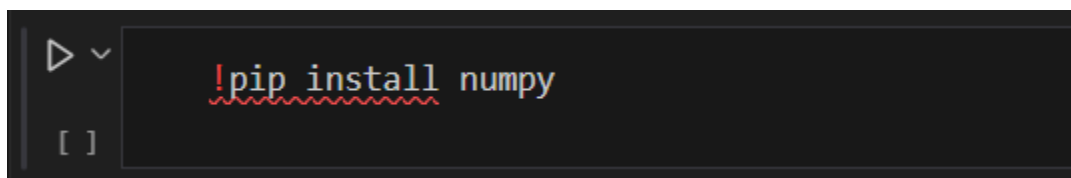

- Run cell then enter your input in the provided field and press Enter to confirm.

Installing and Uninstalling Modules and Libraries

Install Python Packages on Jupyter Notebook

1. Create new cell
2. Type; `!pip install <module/library name>` and run the cell.

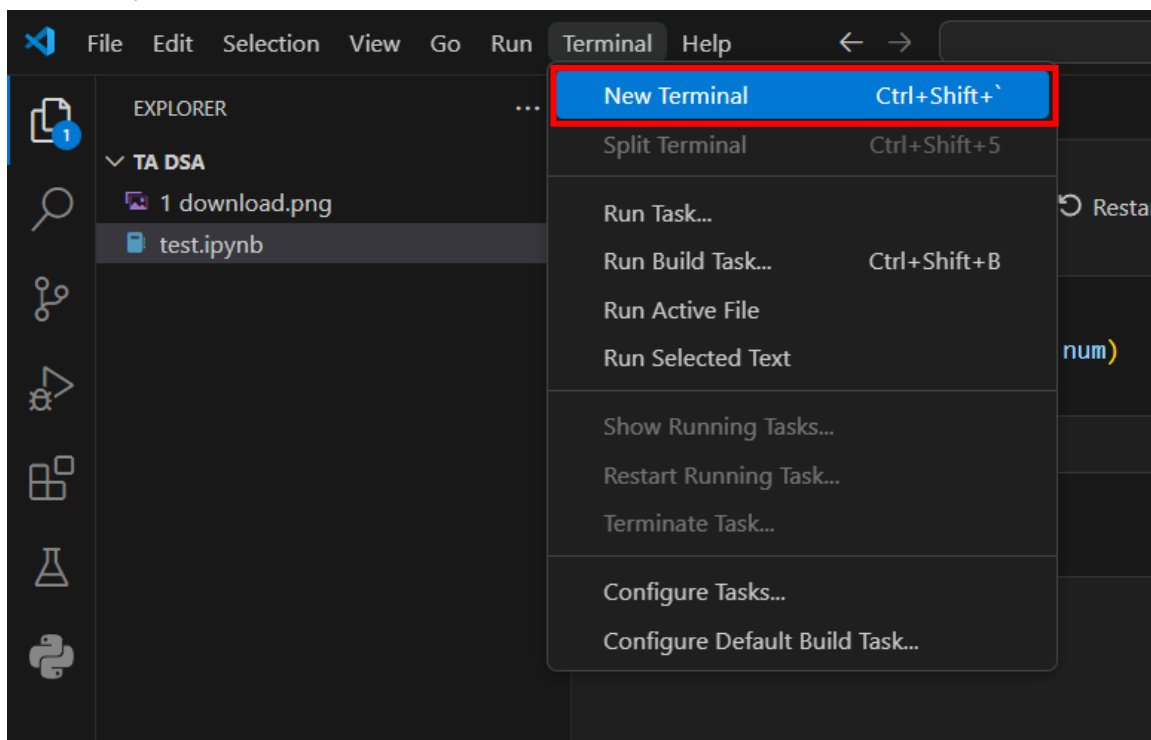

A screenshot of a Jupyter Notebook cell. The cell contains the command `!pip install numpy`. The command is highlighted with a red wavy underline. The cell is in a dark theme, and the command is written in a monospaced font.

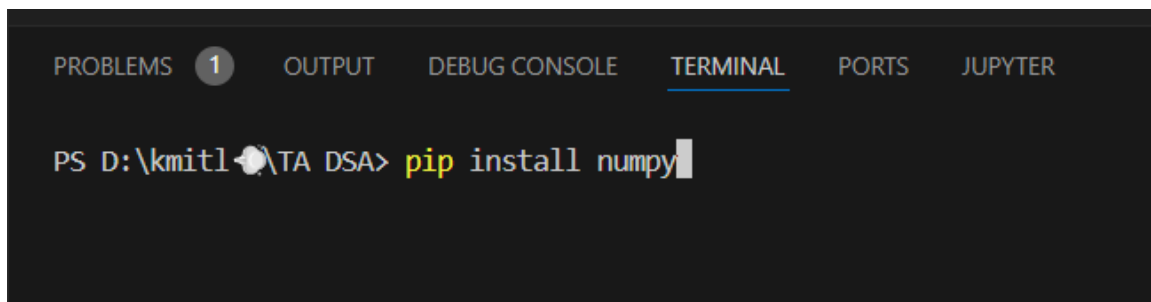

3. Wait for the installation to complete.

Install Python Packages in Visual Studio Code

1. On the top menu, click on **Terminal** > **New Terminal**.

2. In the terminal type: `pip install <module/library name>`.

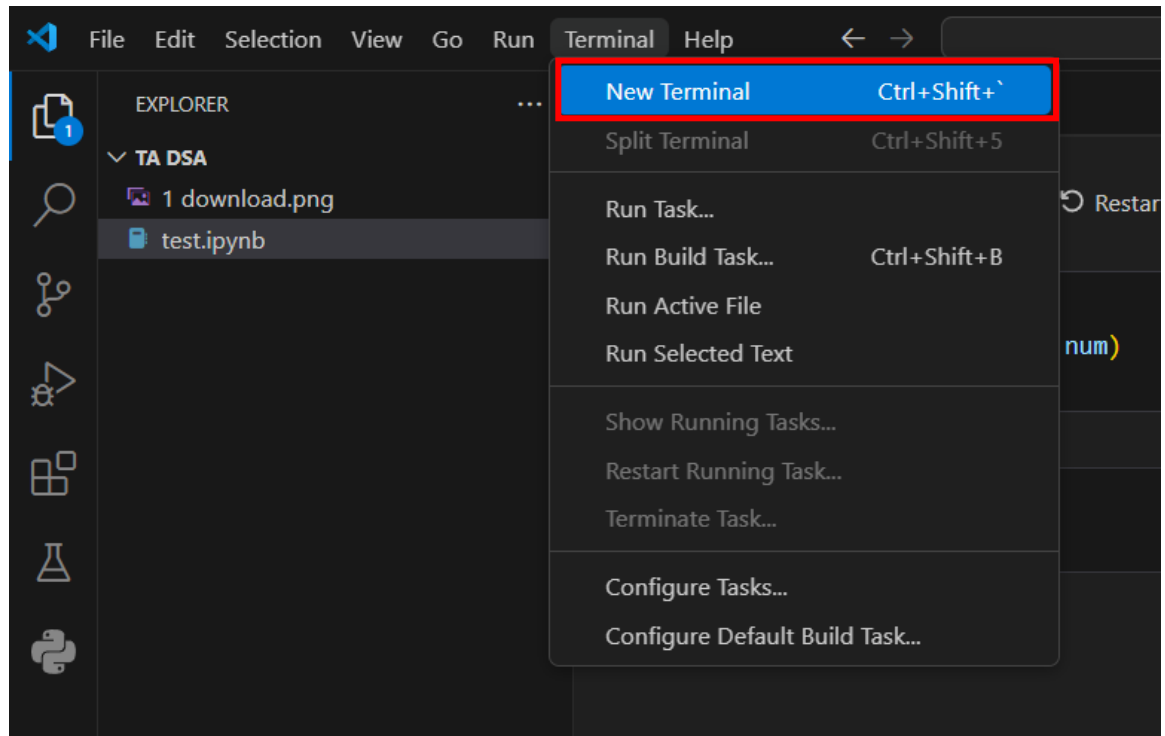

3. Wait for the installation to complete.

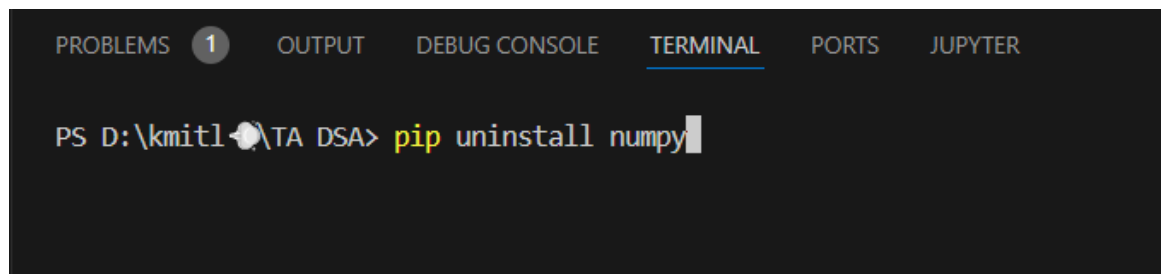

```
Successfully installed numpy-2.1.3
```

Uninstall Python Packages in Visual Studio Code

1. On the top menu, click on **Terminal** > **New Terminal**.

2. In the terminal type *pip uninstall <module/library name>*.

3. Confirm the uninstallation by typing *Y* or cancel with *n*.

```
Proceed (Y/n)? Y
```

4. Wait for the uninstallation to complete.

```
Successfully uninstalled numpy-2.1.3
```
